

FOR IMMEDIATE RELEASE

Solstice Guitars Introduces the Tellurion

Delivering high-end value with a host of intuitive options.

FLAGSTAFF, AZ – November 17, 2022 – ([GUITARpr](#)) – Solstice Guitars just introduced a reimagined update to its custom-T design, previously called the Transit. Now known as the Tellurion, this guitar includes a thoughtful set of new attributes. Designed to be customized, the new Tellurion features include:

- **New 3D Neck Joint**
This dimensional neck joint utilizes a shaped pocket that locks in place with a 3-bolt system. More surface area, more coupling, more strength, longevity, and tone.
- **24-Frets Standard**
The new neck joint & cutaway redesign make for an easy reach. 24 frets are now standard on all models.
- **Neck Reinforcement**
Twin carbon fiber rods and a modern double-action truss rod produce incredibly stable necks. Rod access is now up at the headstock.
- **Hardware & Electronics**
Professional components and hardware are by Gotoh. Includes hand-wired switching circuits and pickups by Lollar, Duncan, Dark Moon, or TV Jones.

The Tellurion is made with 3 tone chamber options:

- Fully chambered, semi-hollow (with or without f-hole)
- Half chambered, bass side (with or without f-hole)
- Half chambered, treble side (no hole)

A solid body option is also available using the highest graded super-light swamp ash.

Handcrafted by a small team, Solstice prides itself on perfect setup and playing action, stability, and longevity. With a base price of \$2400, the new Tellurion offers high-end value with a host of intuitive options for the most demanding players.
